Ceram Negar was established in 1987 with the aim of producing decorative and third firing tiles in Kaveh industrial estate located in Saveh city and This company was put into operation in 1991 with the participation and cooperation of Spanish experts. After a period of successful experience, Ceram Negar became one of the largest and most prominent third firing productive unit in the country. Due to the change of attitude in the consumption of the third firing products in the world, as well as with the advent of digital printing and also the lack of special products for the wall, in line with the company's future vision, the necessary plans were made to launch and establish a wall tile productive unit. In the first step, in 2010, with the prospect of producing 2 million square meters of double fired wall tiles, Arrangements were made for the purchase of modern Italian machinery and equipment. This company was closed in 2015 according to the discretion of the management and the owner at the time,

but finally in 2016 it started working again with a change of ownership and management. With major changes in the attitude and goals of the productive unit, as well as the creation of a new management system a huge and significant change was made in the quality and quantity of Ceram Nagar products, and in this regard, in 2018, with the aim of increasing the annual production capacity to 4.5 million square, a new product line was added to the collection. Ceram Negar also benefited from modern technologies, experienced specialists and the best machines in the world with the aim of completing the product portfolio and also improving the level of the company's products. It was commissioned in 2021 and increased the company's annual production to 6.5 million square meters. According to its production capacity, this company is able to simultaneously produce double- fired wall products with sizes of 30*60, 30*90 and 120*40, as well as floor ceramics in sizes of 100*100, 60*120 and 60*60 in the shortest time to produce and supply to the market. It should be mentioned that all the manufactured products have all domestic standards, international certificates such as ISO 9001, ISO 14001, ISO4500 besides the European CE standard, and the products are sold and exported in all over Iran as well as internationally in the countries of the Middle East, Europe And even Africa.
